

FINPLANNER

Complete Financial Planning Guide

A practical companion to the editable 16-sheet workbook - from cash flow and protection to goals, retirement and a 90-day action plan.

Built for Indian households | Private by design | Phase 1 edition

What this pack helps you do

Now	Next	Later
See cash flow, debt, protection gaps and net worth clearly.	Choose priorities, fund goals and assign dated actions.	Review progress, retirement assumptions and annual changes.

Educational use only. It does not provide personalised investment, tax, legal, insurance or accounting advice.

HOW TO USE THE SYSTEM

Start with a clear order, not every tab at once

A useful planner reduces overwhelm. Complete the workbook in stages and return to it on a regular schedule.

Stage	Workbook sheets	Outcome
1. Snapshot	Profile, Monthly Budget, Net Worth	A grounded view of income, spending, assets and liabilities.
2. Stability	Cash Flow, Emergency Fund, Debt Payoff	Protection against predictable cash shocks and costly debt.
3. Direction	Goals, Retirement Plan, Investment Allocation	Visible targets and contribution requirements.
4. Protection	Insurance Check, Tax Checklist	Fewer overlooked renewals, records and family risks.
5. Action	Dashboard, Annual Review, 90 Day Plan, Checks	Three concrete next steps and a repeatable review rhythm.

A safe working habit

- ☐ Save a clean backup before entering personal figures.
- ☐ Use account nicknames only; never record passwords, PINs or complete identity details.
- ☐ Update balances at the same date where possible.
- ☐ Treat return and inflation figures as assumptions, not promises.
- ☐ Use the Checks sheet before relying on Dashboard signals.

My regular review schedule

STEP 1 - SNAPSHOT

Build your financial baseline

Complete this page before trying to optimise. Approximate numbers are better than leaving important areas invisible.

Snapshot item	Current estimate	Workbook source	Question to ask
Monthly household income		Monthly Budget	Is this a normal month or an unusually high/low month?
Monthly spending		Monthly Budget	Which spending is essential, flexible or avoidable?
Monthly surplus		Dashboard	Is the surplus stable enough to automate?
Total assets		Net Worth	Are values current and reasonable?
Total liabilities		Net Worth	Which debt has the highest effective cost?
Net worth		Dashboard	Is the trend improving quarter by quarter?

The three facts I need to confirm

What surprised me about the snapshot?

STEP 2 - CASH FLOW

Give every monthly rupee a purpose

Use a representative month first, then compare with a three-month average. The annual cash-flow tab captures predictable one-off items.

Category	Planned	Actual	Variance	Decision
Income				Is income stable?
Essentials				What must be protected?
Debt payments				Any costly balances?
Investing / saving				Can this be automated?
Flexible spending				Where is the easiest change?

Annual cash-flow reminders

- ☐ Insurance premiums
- ☐ School / education fees
- ☐ Tax payments
- ☐ Travel and festivals
- ☐ Home or vehicle maintenance
- ☐ Bonuses or variable income

One spending change and one saving automation

STEP 3 - STABILITY

Size an emergency fund for your actual risks

The right reserve depends on essential expenses, income stability, dependants, health needs and insurance - not a universal rule.

Input	Your amount	Why it matters
Essential monthly spending		The base amount the household cannot easily pause.
Chosen months of cover		Use more margin for variable income or higher dependency.
Target reserve		Essential expenses multiplied by chosen coverage.
Current liquid reserve		Count only genuinely accessible funds.
Funding gap		Target minus current reserve, floored at zero.
Monthly transfer		Gap divided by the intended build period.

Reserve quality check

- ☐ Accessible without selling long-term investments
- ☐ Separate from daily spending money
- ☐ No credit-card dependence counted as a reserve
- ☐ Amount reviewed after job, family or health changes

My emergency-fund rule

STEP 4 - NET WORTH

Track direction, not status

Net worth is assets minus liabilities. Its trend is more useful than comparing your number with someone else.

Assets	Value	Liabilities	Balance
Cash and emergency reserve		Credit cards	
Deposits and fixed income		Personal / vehicle loans	
Retirement accounts		Education loan	
Market investments		Home loan	
Gold and property		Other liabilities	
Other assets		Total liabilities	
Total assets		Net worth	

Valuation discipline

- ☐ Use the same date for material balances
- ☐ Avoid inflated property or business values
- ☐ Exclude personal possessions unless financially meaningful
- ☐ Record debt at current outstanding balance
- ☐ Keep a quarterly history in the workbook

The change I want to see by next quarter

STEP 5 - GOALS

Turn wishes into funded targets

Every goal needs a target amount, time horizon, current savings, inflation assumption and expected return assumption.

Goal	Target today	Years	Saved now	Monthly required	Priority
Emergency reserve					1 / 2 / 3
Home					1 / 2 / 3
Education					1 / 2 / 3
Travel / lifestyle					1 / 2 / 3
Other					1 / 2 / 3

Stress-test important goals

Scenario	Return assumption	Inflation assumption	Monthly amount	Is it affordable?
Conservative				Yes / No
Base				Yes / No
Optimistic				Yes / No

If all goals cannot be funded now, what will I delay, reduce or prioritise?

STEP 6 - DEBT

Choose a payoff method you can sustain

The workbook estimates payoff time from balance, interest rate and total payment. Confirm lender terms and prepayment conditions separately.

Debt	Balance	Rate	Minimum	Extra	Priority
Credit card					
Personal loan					
Vehicle loan					
Education loan					
Home loan					

Avalanche	Snowball
Pay extra toward the highest interest rate first. Usually minimises interest cost.	Pay extra toward the smallest balance first. Can create faster motivational wins.

- ☐ Maintain minimum payments on every debt
- ☐ Protect a basic emergency buffer
- ☐ Check prepayment charges and tax trade-offs
- ☐ Stop adding new revolving debt

My chosen payoff rule and first target

STEP 7 - PROTECTION

Reduce risks that savings alone may not absorb

Create an inventory of cover, renewals and nominees. Do not store sensitive documents or credentials in the planner.

Cover type	Sum insured	Renewal	Nominee	Status
Health			Yes / No	OK / Review / Gap
Term life			Yes / No	OK / Review / Gap
Personal accident			Yes / No	OK / Review / Gap
Critical illness			Yes / No	OK / Review / Gap
Motor / property			Yes / No	OK / Review / Gap

Family readiness

- ☐ Emergency contacts are current
- ☐ Nominees are reviewed across accounts
- ☐ Family knows where secure records are kept
- ☐ A basic will / estate plan has been considered
- ☐ Digital recovery instructions exist
- ☐ Coverage is reviewed after major life events

The most important protection gap to resolve

STEP 8 - RETIREMENT AND ALLOCATION

Connect a long-term target to today's contribution

Retirement projections are highly sensitive to inflation, returns, timing and future expenses. Use a range, not one precise answer.

Retirement input	Your assumption	Retirement output	Estimate
Current / retirement age		Years to retirement	
Monthly living cost		Expense at retirement	
Current retirement savings		Estimated corpus	
Current monthly investment		Additional monthly need	
Inflation / return		Total monthly need	

Allocation check	Current %	Target %	Gap
Equity			
Debt / fixed income			
Cash			
Gold / other			

Review whether near-term money is exposed to unsuitable volatility and whether one asset, employer or property dominates the plan.

One retirement or allocation action

STEP 9 - REVIEW

Prepare records and revisit the full plan annually

The tax sheet is an organisation checklist, not a tax calculator. Verify current rules and filing requirements from official sources or a qualified professional.

Tax readiness	Status	Annual financial review	Score 1-5
Income records		Cash flow supports priorities	
Interest and investment statements		Emergency reserve is appropriate	
Capital gains information		Debt is reducing	
Property and loan records		Protection is current	
Eligible evidence		Goals and retirement are funded	
Filing acknowledgement		Records and nominees are organised	

Best financial decision this year

Biggest financial surprise

One habit to continue and one change to make

STEP 10 - ACT

Finish with a focused 90-day plan

A planner creates value only when it changes behaviour. Select no more than three high-impact actions at one time.

Priority	Action	Owner	Due date	Success measure	Status
1					Not started
2					Not started
3					Not started
4					Later
5					Later

My monthly money meeting

- ☐ Update key balances
- ☐ Review Dashboard red flags
- ☐ Confirm automated transfers
- ☐ Move completed actions to done
- ☐ Choose the next most important action

Important limitation

This guide and workbook are educational planning tools. They do not recommend products or securities and do not replace regulated investment, tax, legal, insurance or accounting advice. Future returns are uncertain. Verify assumptions, rules, eligibility and product terms independently.
